

Why have you chosen to join Adler?

As a software engineering intern, I'm particularly drawn to Adler's groundbreaking work in 3D technology. The fact that Adler has developed an incredibly fast and lightweight 3D engine is impressive. Their real-time interactive virtual reality on the New York Times Square Billboard is a testament to their innovation. Unlike traditional engines that require heavy specs and long loading times, Adler's technology breaks the stereotype, making 3D accessible to everyone, everywhere. I'm excited about contributing my skills to such cutting-edge projects and collaborating with experts in the field

Why should Adler want to work with you?

I bring a deep understanding of individual experiences, a commitment to empowering clients, and the ability to foster positive change. My passion for helping others aligns with Adler's mission, and I am eager to contribute to the well-being of those we serve.

Are you crazy in some aspects?

I'm not crazy; I'm just passionate about what I believe in. Sometimes that passion can be mistaken for craziness.

What important truth do very few people agree with you on?

I believe that failure is not only acceptable but also essential for growth. Most people fear failure, but I see it as a valuable learning experience. It's where we discover our limits and find new paths forward.
